

TFT is a worldwide leader in providing first responders with high quality, innovative agent delivery solutions

Project: Metal working/oil mist collection - New Installation.

Client moved into a new facility and wanted a mist collection system that would provide very effective filtration while operating efficiently. They also wanted a system with plenty of capacity for future expansion.

Solution: An iVEC™ System controlling an over-sized yet highly efficient central mist collection system.

Result:

- 40 HP blower system runs at 10 hp
- Plenty of horsepower and collector capacity available for future expansion without the expense of a new system.
- Cleaned air can now be recirculated to improve the inside environment and save even more energy.
