

IvecTM
SYSTEMS

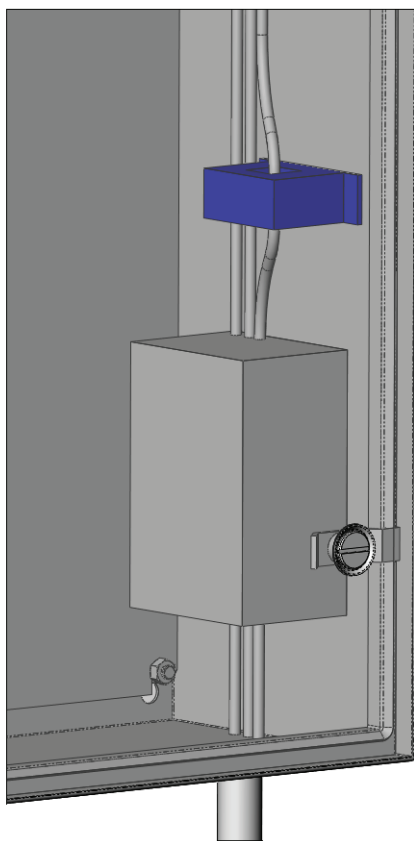

ACCESSORIES

SENSORS

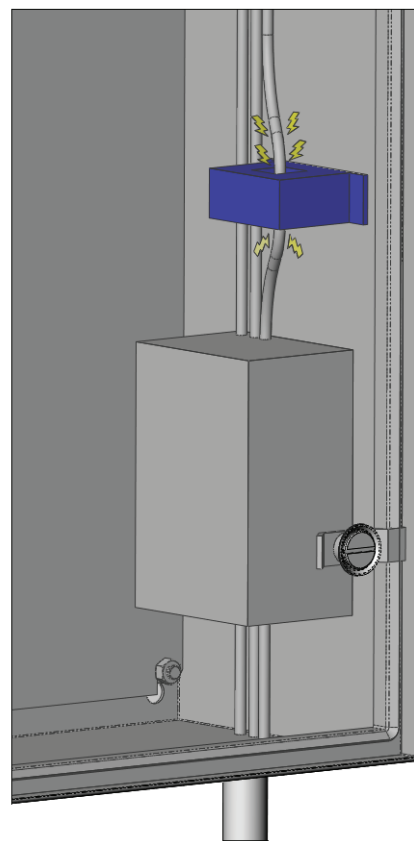

CURRENT

The **Ivec Current Sensor**, when used in conjunction with an Ivec System, assures that once the sensor is activated, the associated auto gate opens.

As the gate opens the ivec control system proceeds to vary the speed of the motor to accommodate for the change to the system and when all sensors are in the off position, stops the dust collector motor entirely; saving energy.

Off Position

On Position

Features

Out of sight, no tampering • Detects motor current • Weld disconnect • Fluid and pump • Mounts in Disconnect

Applications

Welding • Robot • Coolant Pump • Plasma Table • Laser Table

Intelligent Ventilation Energy Controls
