SENSORS

TIMER

The **Ivec Control Timer**, when used in conjunction with an Ivec System, assures that once the hand dial is set to the desired run time, the associated auto gate opens.

As the gate opens the Ivec control system proceeds to vary the speed of the motor to accommodate for the change to the system and, when all sensors are in the off position, stops the dust collector motor entirely; saving energy.

Off Position

On Position

Features: Times out to assure energy savings

Applications: Weld • Mist • Grind • Booth • Table/ Bench

Intelligent Ventilation Energy Controls
