SENSORS

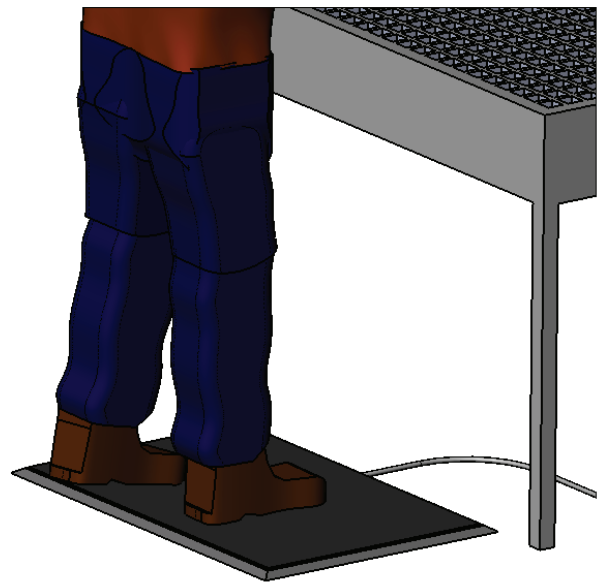

MAT

The **Ivec Sensor Mat**, when used in conjunction with an Ivec System, assures that when a user moves into position, the associated auto gate opens.

As the gate opens the Ivec control system proceeds to vary the speed of the motor to accommodate for the change to the system and, when all sensors are in the off position, stops the dust collector motor entirely; saving energy.

Off Position

On Position

Features

Easy Activation: Just step on the mat to start system

Applications

Welding • Fume

Intelligent Ventilation Energy Controls
