SENSORS

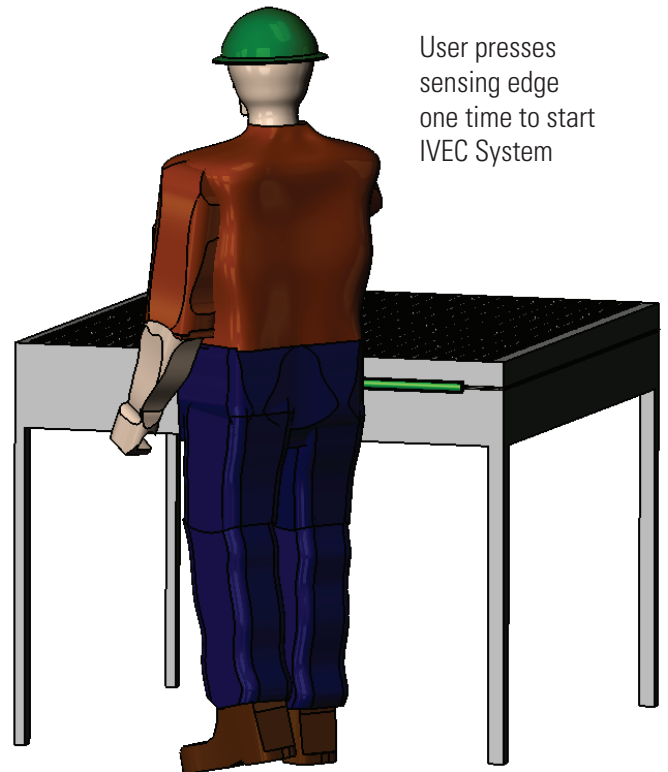

THE EDGE

The **Ivec Sensing Edge**, when used in conjunction with an Ivec System, assures that once the sensor is activated, the associated auto gate opens.

As the gate opens the Ivec control system proceeds to vary the speed of the motor to accommodate for the change to the system and when all sensors are in the off position, stops the dust collector motor entirely; saving energy.

Off Position

User presses sensing edge one time to start IVEC System

On Position

This **Hands Free** Edge Sensor is another example of cutting edge technology from IVEC Systems.
