INTRODUCING IVEC'S NEW E-Z GATES FOR Control of Clean Air, Fume and Dust

Gain the potential to effectively control the removal of fume and dust from shop air and reduce your operating costs with IVEC's new electric E-Z GATES, featuring robust welded enclosures and compatibility with IVEC Intelligent Controls.

NEW BERLIN, WI, December 28, 2020 – Building on decades of experience designing high-quality air filtration applications, IVEC is proud to introduce their new E-Z GATES, a robust, economical, and reliable solution for the control of dust collection systems and the regulation of dust and fume laden air.

E-Z GATES are electric, not pneumatic, thus eliminating the need for compressed air. As a result, they also eliminate the costs associated with maintaining a compressed air solution and the downtime and maintenance costs that can result from corrosion caused by moisture within compressed air.

The E-Z GATES feature a welded body and structural supports that deliver multiple benefits:

- Resists deformation even under large external loads and 100" WC of vacuum pressure
- More reliable performance versus enclosures built with bolts and nuts that may loosen over time
- 30% smaller and 10% less weight than the previous model
- Can be installed horizontally or vertically
- Stiffer gate body helps the gate maintain a true seal

To ensure outstanding gate performance, this proprietary system is engineered to eliminate blade pinching by using a unique blade and seal design. The design also prevents particulate build-up that typically impedes the opening and closing of other gates. Users have an option of choosing flanged, rolled lip adapters, or raw metal edge supporting the chosen duct style design.

E-Z GATES offer opportunities to lower costs further through its compatibility with IVEC Systems' on-demand dust collection controls, which open and close E-Z Gates automatically based on system demands.

IVEC Controls with E-Z GATES boost energy efficiency, minimize dust collector motor wear, optimize system performance, and save money while maximizing fume and dust extraction in your facility. E-Z GATES come in a wide range of sizes and options that can be tailored to fit your dust collection or fume extraction needs.

E-Z GATES systems reflect IVEC's commitment to providing customers with reliability and performance – having undergone thorough lab testing and featuring an extensive five-year warranty on the actuator. To simulate a 10-year life cycle, this gate was put through 200,000 open/close sequences without a single failure.
