

# IVEC SYSTEMS, LLC

## ABOUT IVEC SYSTEMS, LLC

In 2007, a team of industry experts was assembled to design a state-of-the-art ventilation control system that would offer customers a “better choice” in controlling dust collection and mist filtration systems. The team achieved its goal, but went on to include system features that are currently unsurpassed in the dust collection controller industry. This Team soon became a company that was launched as IVEC® Systems (Intelligent Ventilation Energy Controls). IVEC Systems is located in Southeastern Wisconsin and offers complete control systems and installations for a wide range of applications.

New Berlin, WI

## 2021 BUSINESS FRIEND OF THE ENVIRONMENT

IVEC Systems, LLC recently launched its IVEC Command Industrial Air Filtration Technology. IVEC Command is a remote access and monitoring software utilized to enhance and optimize any dust collection system.

By utilizing complex algorithms, IVEC Command can provide effective preventative maintenance, direct troubleshooting assistance, dynamic system reports, support documents, and more, from anywhere in the world. Should there be a fault or failure in the system, IVEC Command immediately alerts key individuals to the problem, as well as provides quick methods to solve the issue and resume production.

This software is a valuable tool to reduce a company's carbon footprint and save energy. Manufacturers have used IVEC Command software to discover broken filters that were contaminating outside air, and discover problems with air pressure that would have led to higher-than-needed energy consumption. The software can also be used to track and record energy savings.

For spearheading an innovative product that can help reduce energy consumption by manufacturers and other companies, IVEC Systems, LLC is receiving this Business Friend of the Environment Award.
